

Sydney Girls High School 2013

TRIAL HIGHER SCHOOL CERTIFICATE EXAMINATION

Extension 1 Mathematics

General Instructions

- Reading Time 5 minutes
- Working time 2 hours
- Write using black or blue pen Black pen is preferred
- Board-approved calculators may be used
- A table of standard integrals is provided at the back of this paper
- In Questions 11 14, show relevant mathematical reasoning and/or calculations

Total marks - 70

Section I

Pages 3 - 6

10 Marks

- Attempt Questions 1 10
- Answer on the Multiple Choice answer sheet provided
- Allow about 15 minutes for this section

Section II

Pages 7 - 13

60 Marks

- Attempt Questions 11 14
- Answer on the blank paper provided
- Begin a new page for each question
- Allow about 1 hours and 45 minutes for this section

Name:	THIS IS A TRIAL PAPER ONLY
Teacher:	It does not necessarily reflect the format or the content of the 2013 HSC Examination Paper in this subject.

Attempt Questions 1-10

Allow about 15 minutes for this section

Use the multiple-choice answer sheet for Questions 1-10

- (1) The acute angle between the straight lines $y = \sqrt{3}x + 2$ and y = 2 is:
- (A) 30°
- (B) 60°
- (C) 47°
- (D) 68°
- (2) The value of $\lim_{n\to\infty} \frac{5(10^n)+3}{2(10^n)+5}$ is:
- (A) $\frac{3}{5}$
- (B) 0
- (C) 1
- (D) $\frac{5}{2}$
- (3) The exact value of k given $\int_0^1 \frac{dx}{x^2 + 3} = k\pi$ is:
- (A) $\sqrt{3}$
- (B) $\frac{\sqrt{3}}{9}$
- (C) $\frac{\sqrt{3}}{18}$
- (D) $6\sqrt{3}$

- (4) Which of the following is the derivative of $x^2 \cos^{-1} 3x$?
- (A) $2x \sin^{-1} 3x$
- (B) $2x\cos^{-1}3x + x^2\sin^{-1}3x$
- (C) $2x\cos^{-1}3x \frac{x^2}{\sqrt{1-9x^2}}$
- (D) $2x\cos^{-1}3x \frac{3x^2}{\sqrt{1-9x^2}}$
- (5) The solution to $ln(x^3 + 19) = 3ln(x + 1)$ is:
- (A) x = -3 or x = 2
- (B) x = 3
- (C) x = -2
- (D) x = 2

(6) The exact value of $\int_0^{\frac{\pi}{4}} \cos^2 \frac{1}{2} x \, dx$ is:

- (A) $\frac{1+\pi}{\sqrt{2}}$
- (B) $\frac{2\sqrt{2} + \pi}{8}$
- $(C) \quad \frac{2\sqrt{2} + \pi}{4}$
- $(D) \quad \frac{\sqrt{2} + \pi}{8}$

(7) The domain of $y = \cos^{-1} \sqrt{\frac{1}{4} - x^2}$ is:

- $(A) \quad 0 \le x \le \frac{1}{2}$
- (B) $\frac{-1}{4} \le x \le \frac{1}{2}$
- (C) $\frac{-1}{2} \le x \le \frac{1}{2}$
- (D) $\frac{1}{4} \le x \le \frac{1}{2}$

- (8) A metal disc, 5 cm radius, expands when heated. If the radius is increasing at the rate of $0.01 \, cm \, / \sec$, the rate at which the area of one of the faces is increasing is given by:
 - (A) $\frac{\pi}{10} cm^2 / \sec$
 - (B) $\frac{\pi}{5}$ cm²/sec
 - (C) $\frac{2\pi}{5}$ cm²/sec
 - (D) $\frac{5\pi}{2}$ cm²/sec
- (9) Two roots of the equation $x^3 2x^2 + kx + 18 = 0$ are opposites. The value of k is:
 - (A) 9
 - (B) 9
 - (C) 6
 - (D) 6
- (10) A point moving with simple harmonic motion starts from a point 5cm from the centre of the motion with a speed of 1cm/s. The period is 8 seconds. The maximum acceleration is:
 - (A) $4.9 ms^{-2}$
 - (B) $5.2ms^{-2}$
 - (C) 24.4ms⁻²
 - (D) 25.6ms⁻²

Section II

60 marks

Attempt Questions 11 - 14

Allow about 1 hours and 45 minutes for this section

Answer on the blank paper provided. Begin a new page for each question Your responses should include relevant mathematical reasoning and/or calculations.

Question 11 (Begin a New Page)

(15 Marks)

(a) By making the substitution
$$u^2 = x + 1$$
, find $\int \frac{x+2}{\sqrt{x+1}} dx$

[2]

(b) Solve:
$$x+2 < \frac{4}{x-1}$$
 $(x \ne 1)$

[3]

(c) Find the general solution (in radian form) of the equation
$$\cos 2x = \cos x$$

[3]

(d)

i) Sketch the graph of the curve
$$y = 3 \sin^{-1}(x/2)$$
, clearly indicating the domain and range.

[1]

ii) Find the area enclosed between the curve
$$y = 3 \sin^{-1}(x/2)$$
, the line $x = 1$ and the positive x axis.

[3]

(e) Consider the series
$$\tan x + \tan^3 x + \tan^5 x + \dots$$
, where $0 \le x \le \frac{\pi}{4}$

i) Explain why this series has a limiting sum

ii) Show that
$$S_{\infty} = \frac{1}{2} \tan 2x$$

[1]

[2]

(15 Marks)

(a) Use mathematical induction to show that $5^n + 2(11^n)$ is a multiple of 3 for all positive integers n.

[3]

(b) At time t minutes the number of individuals in each of population

A and B is given by $N_A = 15 + 20e^{-0.5t}$ and $N_B = 5 + 40e^{-0.5t}$ respectively.

i) Find the initial size of population A

[1]

ii) Find the initial rate of change of population B

[1]

iii) Find the time at which the two population sizes are equal.

[2]

- (c) A particle moves along the x axis according to the equation $x = 6 \sin 2t 2\sqrt{3} \cos 2t$.
 - i) Express x in the form $R \sin(2t \alpha)$ where R > 0 and $0 \le \alpha \le \pi/2$.

[2]

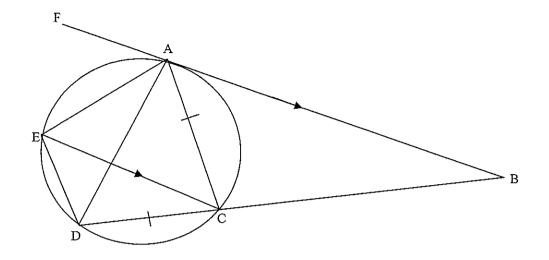

ii) Prove that the particle moves in simple harmonic motion.

[2]

iii) Find when the particle is 2m to the right of the origin. (correct to 2 decimal places)

[2]

(d) AB is a tangent to the circle. $AB \parallel EC$ and CD = AC.

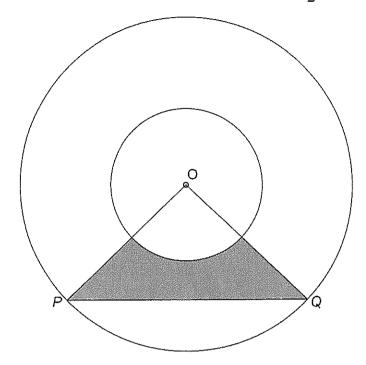

- i) Copy the diagram on your answer sheet
- ii) Prove that $AC \parallel ED$

[2]

- (a) The function f(x) is given by $f(x) = \sqrt{x+6}$ for $x \ge -6$
 - i) Find the inverse function $f^{-1}(x)$ and find its domain. [2]
 - ii) On the same diagram, sketch the graphs of y = f(x) and $y = f^{-1}(x)$. Showing Clearly all the intercepts on the coordinates axes. [2]
 - iii) Show that the x coordinates of any points of intersection of the graphs of y = f(x) and $y = f^{-1}(x)$ satisfy the equation $x^2 x 6 = 0$. [1]
 - iv) Hence find the point of the intersection of the two graphs. [1]
- (b) A vertical flagpole CD of height h metres stands with its base C on horizontal ground. A is a point on the ground due west of C and B is a point on the ground 40 metres due south of A. From A and B the angles of elevation of the top D of the flagpole are 20° and 10° respectively.
 - i) Draw a diagram for the information given [1]
 - ii) Find the height of the flagpole to the nearest metre. [3]

Question 13 continues on the next page

(c) Two concentric circles with centre O have radii $2 \ cm$ and $4 \ cm$. The points P and Q lie on the larger Circle and $\angle POQ = x$, where $0 \le x \le \frac{\pi}{2}$

i) If the area $A cm^2$ of the shaded region is $\frac{1}{16}$ the area of the larger circle, show that x satisfies the equation $8 \sin x - 2x - \pi = 0$.

[1]

- ii) Show that this equation has a solution $x = \alpha$, where $0.5 \le \alpha \le 0.6$ [2]
- iii) Taking 0.6 as a first approximation for α , use one application of Newton's method to find a second approximation, giving the answer correct to 2 decimal places.

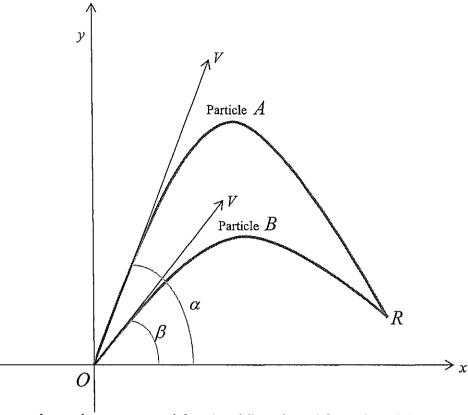

End of Question 13

Question 14 (Begin a New Page)

(15 Marks)

- (a) A particle moves in a straight line. At time t seconds its displacement is x metres from a fixed point O on the line, its acceleration is a ms^{-2} , and its velocity is v ms^{-1} , where v is given by $v = \frac{32}{x} \frac{x}{2}$. Initially the particle is at x = 2.
 - i) Find an expression for a in terms x. [2]
 - ii) Show that $t = \int \frac{2x}{64 x^2} dx$, and hence show that $x^2 = 64 60e^{-t}$. [3]
 - iii) Sketch the graph of x^2 against t and describe the limiting behaviour of the particle. [1]
 - (b) $P(2t,t^2)$ is a point on the parabola $x^2 = 4y$ with focus F. The point M divides the interval FP externally in the ratio 3:1. Show that as P moves on the parabola $x^2 = 4y$, then the locus of M is given by $x^2 = 6y + 3$. [3]

Question 14 continues on the next page

- (c) The diagram above shows two particles A and B projected from the origin. Particle A is projected with initial velocity V m/s at an angle α and Particle B is projected T seconds later with the same initial velocity V m/s but an angle of β . The particles collide at the point R.
 - i) You may assume that the equation of the path of A is given by

$$y = -\frac{gx^2}{2V^2}\sec^2\alpha + x\tan\alpha$$

Write down the equation of the path of B.

ii) Show that the x-coordinate of the collision point R is given by

$$x = \frac{2V^2 \cos \alpha \cos \beta}{g \sin(\alpha + \beta)}$$
 [2]

[1]

[1]

iii) You may assume that the horizontal displacement of A after t seconds is given by

$$x = Vt \cos \alpha$$

Write down the equation for the horizontal displacement of B.

iv) Show that, for the collision to take place, the value of T is given by

$$T = \frac{2V(\cos\beta - \cos\alpha)}{g\sin(\alpha + \beta)}$$
 [2]

End of paper

BLANK PAGE

STANDARD INTEGRALS

$$\int x^n dx = \frac{1}{n+1} x^{n+1}, \quad n \neq -1; \quad x \neq 0, \text{ if } n < 0$$

$$\int \frac{1}{x} dx = \ln x, \quad x > 0$$

$$\int e^{ax} dx = \frac{1}{a} e^{ax}, \quad a \neq 0$$

$$\int \cos ax dx = \frac{1}{a} \sin ax, \quad a \neq 0$$

$$\int \sin ax dx = -\frac{1}{a} \cos ax, \quad a \neq 0$$

$$\int \sec^2 ax dx = \frac{1}{a} \tan ax, \quad a \neq 0$$

$$\int \sec ax \tan ax dx = \frac{1}{a} \sec ax, \quad a \neq 0$$

$$\int \frac{1}{a^2 + x^2} dx = \frac{1}{a} \tan^{-1} \frac{x}{a}, \quad a \neq 0$$

$$\int \frac{1}{\sqrt{a^2 - x^2}} dx = \sin^{-1} \frac{x}{a}, \quad a > 0, \quad -a < x < a$$

$$\int \frac{1}{\sqrt{x^2 + a^2}} dx = \ln \left(x + \sqrt{x^2 - a^2} \right), \quad x > a > 0$$

$$\int \frac{1}{\sqrt{x^2 + a^2}} dx = \ln \left(x + \sqrt{x^2 + a^2} \right)$$

NOTE: $\ln x = \log_e x$, x > 0

Sydney Girls High School

Mathematics Faculty

Years 12 HSC Mathematics Extension 1 2013 Trial

Question	Marker's Comment
11	 This question overall was completed very average. Some students answered it very well and others very poorly, there was a large range. a) Substitution and integration was done well but substituting back in terms of x was very poor. b) Most students realised to multiply both sides by (x-1)² but then most couldn't complete and solve. c) Most students didn't know correct general solution and some even failed to recognise to substitute cos 2x = 2 cos² x-1 to be able to factorise and solve. d) Overall was done well, most knew domain and range. Shaded area was also done well. e) i) To obtain the mark both: r = tan² x and if 0 < x < π/4 then 0 < tan² x < 1 had to be stated. ii) Was done very well.
12	 b) iii) Many students successfully found the derivative but forgot to substitute for t and thus did not answer the question. c) ii) All calculus answers involving trigonometric functions must be in terms of radians. Radians are a linear measure, degrees are a measure of turning. d) There were many solutions to this question because of the number of equal angles in the diagram. Deductive solutions should be a logical progression of statements to a conclusion. Students who simply wrote down everything they could see from the diagram without a logical progression failed to gain full marks.
13	This question was done well. Only some students had difficulties with inverse functions and sketching these functions. A number of students couldn't do the three dimensional trigonometry.
14	This question was done very poorly. Many students didn't know the formula $a=\frac{d}{dx}\frac{1}{2}v^2$ or didn't know how to use it properly. Many students have no idea how to show a given formula in all parts of this question.
