

# *Regions In The Plane*

To draw a region, first you have to sketch the curve.

- 1) If  $<$  or  $>$  use a dotted line
- 2) If  $\leq$  or  $\geq$  use a solid line
- 3) Circle the point of intersection if it is NOT included (i.e. one is  $<$  or  $>$ )

To calculate the region, test a point NOT on the curve.

e.g. (i)  $y < x + 3$

test  $(0, 0)$

$$0 < 3 \quad \checkmark$$

(ii)  $x^2 + y^2 \geq 9$

test  $(0,0)$

$$0^2 + 0^2 \geq 9$$

$$0 \geq 9 \quad \times$$

(ii)  $y < \sqrt{4 - x^2}$

test  $(0, 0)$

$$0 < \sqrt{4 - 0^2}$$

$$0 < 2 \quad \checkmark$$

(iv)  $y \geq x^2$  and  $y \leq 3x + 4$

$y \geq x^2$

$y \leq 3x + 4$

test (0,1)

test (0,0)

$0 \leq 1^2$

$0 \leq 0 + 4$

$0 \leq 1$  ✓

$0 \leq 4$  ✓

point of intersection

$$x^2 = 3x + 4$$

$$x^2 - 3x - 4 = 0$$

$$(x + 1)(x - 4) = 0$$

$$x = -1 \text{ or } x = 4$$
