

Exponential Function

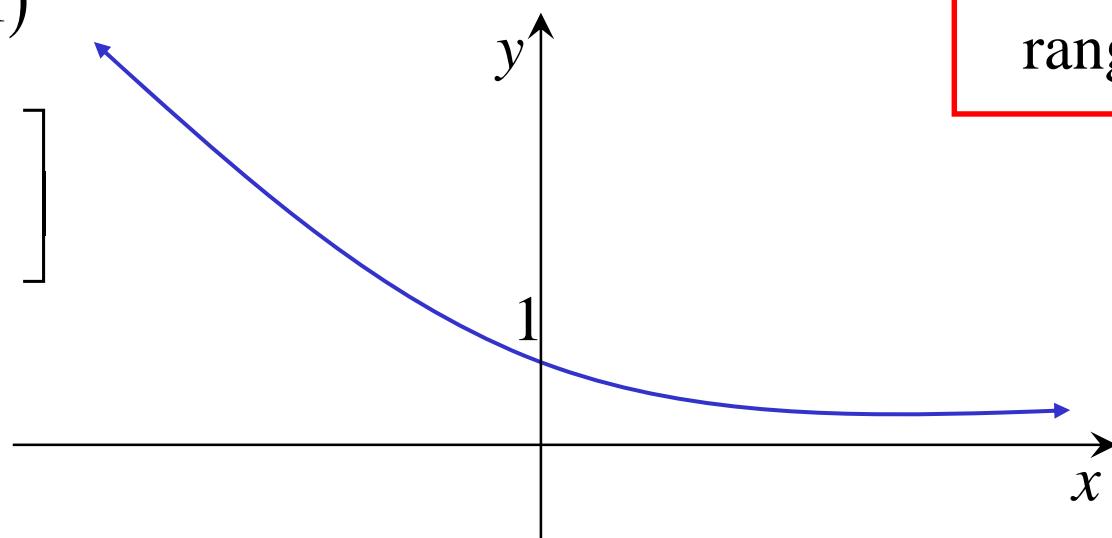

$y = f(-x)$
reflects in the y-axis

$$y = a^x
(0 < a < 1)$$

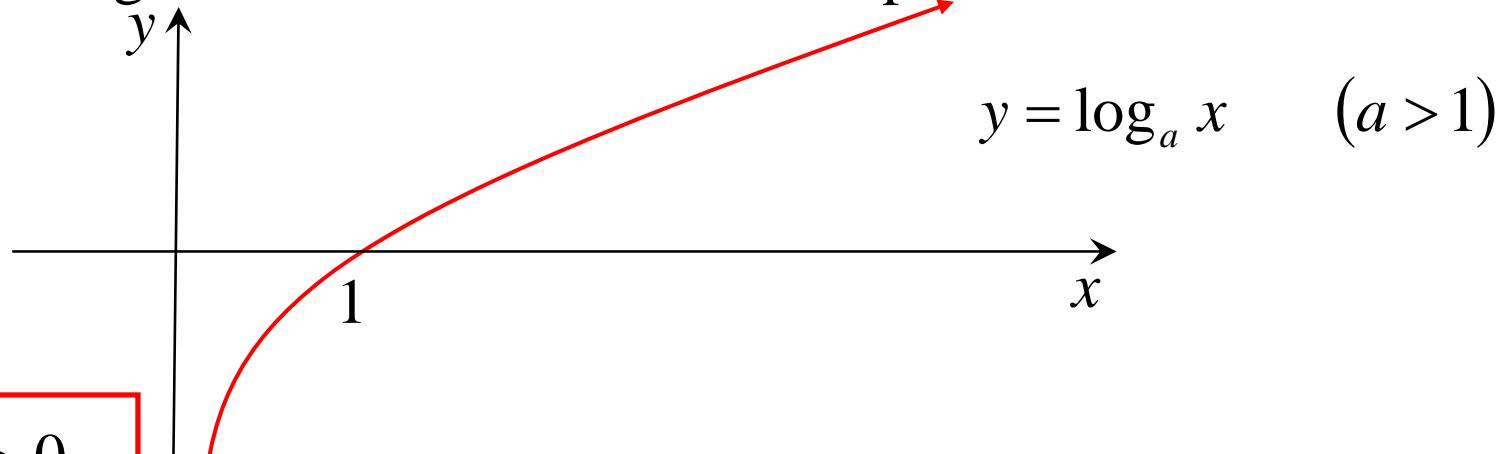

$$\left[\begin{array}{l} y = a^{-x} \\ (a > 1) \end{array} \right]$$

domain : all real x
range : $y > 0$

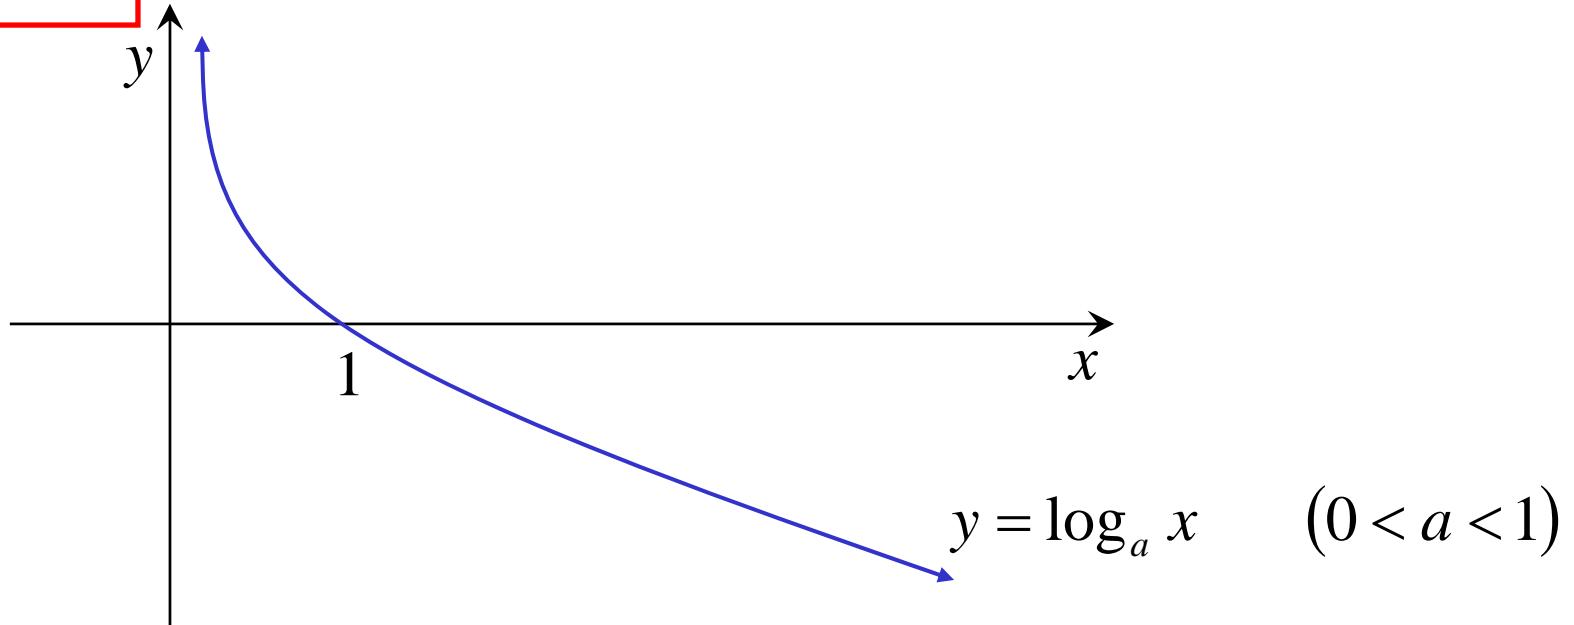

Logarithmic Function

Logarithms are the **inverse** of exponentials.

domain : $x > 0$
range : all real y

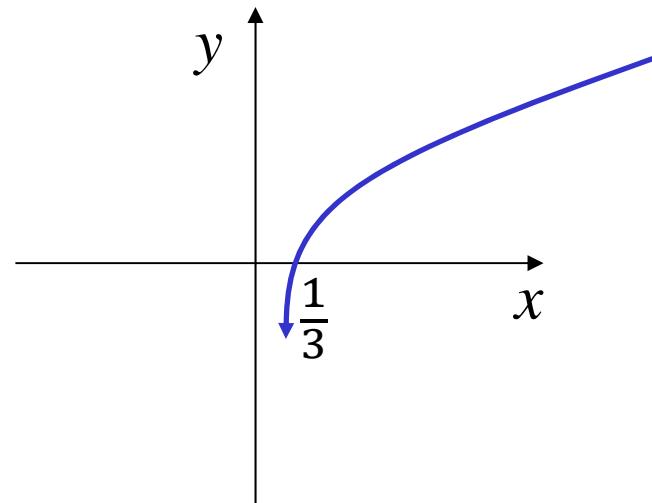

e.g. (i) $y = \log(3x)$

$$y = \log 3 + \log x$$

1. *basic curve*: $y = \log x$

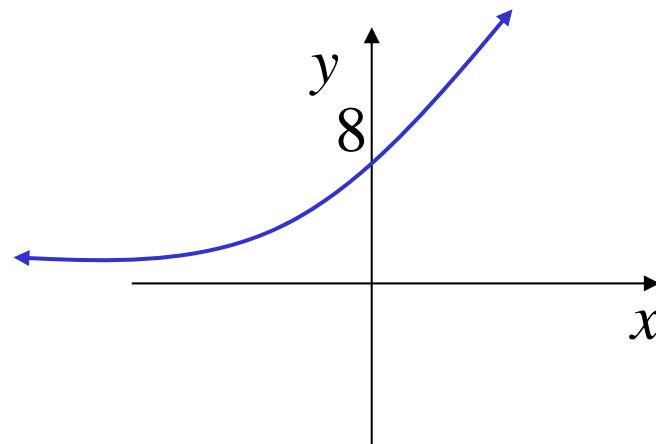

2. *shift up log 3 units*

(ii) $y = 2^{x+3}$

1. *basic curve*: $y = 2^x$

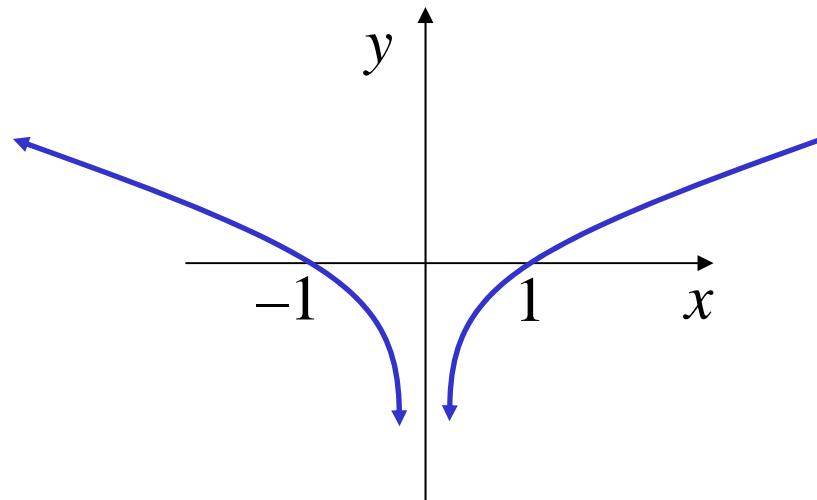

2. *shift left 3 units*

e.g. (i) $y = \log|x|$

1. *basic curve*: $y = \log x$

2. *reflect in y axis*
