

Methods In Algebra

Like terms can be added or subtracted, unlike terms cannot.

Index Laws

$$a^m \times a^n = a^{m+n}$$

$$a^m \div a^n = a^{m-n}$$

$$(a^m)^n = a^{mn}$$

$$a^0 = 1$$

Index Meaning

+ : top of the fraction (*same side*)

– : bottom of the fraction (*other side*)

$$x^{\frac{a}{b}} = \sqrt[b]{x^a}$$

OR

$$= \left(b\sqrt{x} \right)^a$$

$$\text{e.g. } (i) x^{-3} = \frac{1}{x^3}$$

$$(ii) \ a^5b^{-7} = \frac{a^5}{b^7}$$

$$(iii) \frac{3}{4}x^{-4}a^9b^{-2} = \underline{\underline{\frac{3a^9}{4x^4b^2}}}$$

$$(iv) x^{\frac{1}{4}} = \underline{\sqrt[4]{x}}$$

$$(v) y^{\frac{2}{3}} = \underline{\sqrt[3]{y^2}}$$

$$\begin{aligned}(vi) x^{\frac{3}{2}} &= \sqrt{x^3} \\&= \sqrt{x^2x} \\&= x\sqrt{x}\end{aligned}$$

OR

$$\begin{array}{ccc} & \text{see} & \text{think} \\ & \swarrow & \searrow \\ x^{\frac{3}{2}} & = & x^{\frac{1}{2}} \\ & = & \underline{x\sqrt{x}} \\ x^1 & \nearrow & \nwarrow \\ & \text{and} & x^{\frac{1}{2}} \end{array}$$

$$(vii) m^{\frac{27}{4}} = \underline{m^6 \sqrt[4]{m^3}}$$

$$(viii) \frac{1}{2} n^{-6} p^{500} q^{-\frac{1}{28}} c^{\frac{7}{6}} r^{69} = \underline{\frac{p^{500} c^6 \sqrt[6]{c} r^{69}}{2 n^6 \sqrt[28]{q}}}$$

$$(ix) \left(\frac{2}{3}\right)^{-2} = \left(\frac{3}{2}\right)^2$$

$$= \underline{\frac{9}{4}}$$

$$(x) \text{ Solve } 9^{4x+1} = \frac{1}{27}$$

$$3^{8x+2} = 3^{-3}$$

$$8x + 2 = -3$$

$$8x = -5$$

$$x = \underline{-\frac{5}{8}}$$
