

# *Series – The Sum Of A Sequence*

$$T_1 + T_2 + T_3 + \dots + T_n = S_n = \sum_{k=1}^n T_k$$

$$\begin{aligned} e.g. (i) \sum_{n=1}^5 2n + 3 &= (2+3) + (4+3) + (6+3) + (8+3) + (10+3) \\ &= \underline{\underline{45}} \end{aligned}$$

(ii) If  $S_{10} = 29$  and  $S_{11} = 37$ , find  $T_{11}$

$$\begin{aligned} T_{11} &= S_{11} - S_{10} \\ &= 37 - 29 \\ &= \underline{\underline{8}} \end{aligned}$$

(iii) If  $S_n = 5n^2 - 2$ , find  $T_n$

$$\begin{aligned}T_n &= S_n - S_{n-1} \\&= 5n^2 - 2 - [5(n-1)^2 - 2] \\&= 5n^2 - 2 - 5n^2 + 10n - 5 + 2 \\&= \underline{\underline{10n - 5}}\end{aligned}$$

# *Sum Of An Arithmetic Series*

$$S_n = a + a + d + a + 2d + \dots + l - 2d + l - d + l$$

$$\underline{S_n = l + l - d + l - 2d + \dots + a + 2d + a + d + a}$$

$$\begin{aligned} 2S_n &= a + l + a + l + a + l + \dots + a + l + a + l + a + l \\ &= n(a + l) \end{aligned}$$

$$S_n = \frac{n}{2}(a + l)$$

if we know  $l$

otherwise;

$$S_n = \frac{n}{2}\{a + a + (n-1)d\}$$

$$S_n = \frac{n}{2}\{2a + (n-1)d\}$$

e.g. (i) If  $a = 3$  and  $T_6 = 96$ , find  $S_6$

$$S_n = \frac{n}{2}(a + l)$$

$$\begin{aligned} S_6 &= \frac{6}{2}(3 + 96) \\ &= \underline{\underline{297}} \end{aligned}$$

(ii) Find the sum of the first 100 even numbers

$$a = 2, d = 2 \text{ and } n = 100$$

$$S_n = \frac{n}{2}\{2a + (n-1)d\}$$

$$\begin{aligned} S_{100} &= \frac{100}{2}\{4 + (99)(2)\} \\ &= 50 \times 202 \\ &= \underline{\underline{10100}} \end{aligned}$$

(iii) The sum of the first 10 numbers is 100 and the first 5 numbers is 25.

Find  $a, d$  and the general term.

$$\begin{array}{ll} S_{10} = 100 & S_5 = 25 \\ \frac{10}{2} \{2a + 9d\} = 100 & \frac{5}{2} \{2a + 4d\} = 25 \\ 2a + 9d = 20 & a + 2d = 5 \end{array}$$

$$2a + 9d = 20$$

$$\underline{2a + 4d = 10}$$

$$5d = 10$$

$$d = 2 \quad \therefore a = 1$$

$$\begin{aligned} T_n &= a + (n-1)d \\ &= 1 + (n-1)2 \\ &= 2n - 1 \end{aligned} \quad \underline{\therefore a = 1, d = 2, T_n = 2n - 1}$$

$$(iv) \sum_{n=1}^{10} (3n - 6)$$

$$a = -3, l = 24, n = 10$$

$$S_n = \frac{n}{2}(a + l)$$

$$\begin{aligned} S_{10} &= \frac{10}{2}(-3 + 24) \\ &= \underline{\underline{105}} \end{aligned}$$
